PROFILE

I break things — and I build things that break them. Driven by a deep fascination with low-level mechanics, I view cybersecurity not just as code, but as a craft — bridging code quality with Web/API penetration testing, threat modeling and secure architecture. B.Sc. Software Engineering, Tomsk State University — Conferred Jul 2026. Proven via **20+ Hall of Fame** (Verisign \$1,000 CSRF → ATO · DigitalOcean · Pinterest · Dell via Bugcrowd), Bastion Security **11 findings / 8 reports / 0 rework / Top 5/100 CTF** (6 Linux + 4 Windows privesc across 8 web apps & 2 ranges), and SOC detection engineering (ELK home lab, 50k+ events, 5 Sigma MITRE-mapped). Hack The Box **Top 0.55% Pro Hacker** & TryHackMe Top 1% — reproducible evidence and clear remediation within authorized scope.

EXPERIENCE

Security Engineering Intern (Authorized Scope: Web/API & Network Assessment) July 2024 – September 2024

Bastion Security — Security Engineering Internship

- Assessed **8 web apps & 2 network ranges** in authorized scope — **11 validated findings** (auth bypass, injection, privilege escalation), 6 Linux + 4 Windows root validations.
- Validated every finding to root where applicable; documented **8 reports with 0 rework** — exploitation paths and remediation notes; presented for internal review.
- Validated via manual testing plus cloud posture checks (ScoutSuite / Prowler-style) in lab environment.
- Ranked **Top 5 of 100** in internal penetration-testing and privilege-escalation challenges.

[View Credential](#) → · Bastion Security internship certificate

Software Engineer Intern

Feb 2025

National Research Tomsk State University

- Designed and developed **2 prototypes** within university research projects; created **12 diagrams** (UML, component, activity) and academic-standard technical documentation across full SDLC.
- Engineering work that builds system reasoning, architecture and tooling — enabling reproducible findings and clearer remediation.

SECURITY RECOGNITION & EVIDENCE

Hall of Fame — 20+ acknowledgments via Bugcrowd (bugcrowd.com/h/mahmoud_adel) — Named: Verisign \$1,000 CSRF – Account Takeover (DomainScope OAuth state, Apr 2018, Critical), DigitalOcean (Critical, Apr 2019), Pinterest & Dell (Hall of Fame, 2018).

Competitive & labs: Bastion internal CTF **Top 5/100**; Hack The Box **Top 0.55% Pro Hacker** — verified badges; TryHackMe **Top 1%** — [@iamkernel](#).

Detection & research: ELK SOC Home Lab — 50k+ events, 5 Sigma MITRE-mapped, Kibana dashboards & triage workflow; IR malware triage (isolated Windows 10 VM, Sysmon/KAPE); AppArmor RCE mitigation; API security & AD attack paths.

SELECTED PROJECTS

- ELK SOC Home Lab** — Dockerized ELK 8.12 (Filebeat → Logstash → Elasticsearch → Kibana), 50k+ events, 5 Sigma rules, tuned noisy sudo 180 → 12/day.
- IR Lab — Windows Malware Triage** — Controlled IR on isolated Win10 VM, Sysmon / Wireshark / KAPE, containment & 1-page executive report.

CORE SKILLS

Offensive Security

Web/API Security, OWASP & Vulnerability Assessment, Active Directory (Kerberos / BloodHound / Impacket), Privilege Escalation (Linux/Windows lab), Burp Suite, Nmap, SQLMap, Nuclei, ffuf, Red Teaming — Adversary Simulation

Systems & Defense

Linux, Windows, TCP/IP, Network Security, Firewall, Wireshark, MITRE ATT&CK, SIEM (ELK) — Detection Engineering (Sigma, Suricata), Cloud Security (AWS IAM, ScoutSuite, Prowler), Incident Response, Splunk (lab), YARA (lab), AppArmor

Engineering & Tooling

Python, Bash, JavaScript, C/C++, Assembly, SQL, Docker, Git, Ghidra (lab), Metasploit (lab), Cobalt Strike, Sliver

EDUCATION

B.Sc. Software Engineering — Conferred Jul 2026

Tomsk State University
Sep 2022 – Jul 2026

CREDENTIALS & TRAINING

Blue Team Junior Analyst

SecurityBlue Team · 2023
[Verify](#) ↗

Cyber Threat Intelligence

IBM · 2023
