PROFILE

Cybersecurity Engineer driven by a deep fascination with low-level systems and system architecture. Inspired to enter the field early on, I developed a passion for understanding the "core mechanics" of technology—earning the moniker Kernel. From offensive mechanics to SOC defense, I view infrastructure security as an art form built on fundamental system principles.

EXPERIENCE

Security Engineering Intern (Authorized Scope: Web/API & Network Assessment) July 2024 – September 2024

Bastion Security — Security Engineering Internship

- Assessed **8 web apps** & **2 network ranges** in authorized scope — **11 validated findings** (auth bypass, injection, privilege escalation), 6 Linux + 4 Windows root validations.
- Validated every finding to root where applicable; documented **8 reports with 0 rework** — exploitation paths and remediation notes; presented for internal review.
- Validated via manual testing plus cloud posture checks (ScoutSuite / Prowler-style) in lab environment.
- Ranked **Top 5 of 100** in internal penetration-testing and privilege-escalation challenges.

[View Credential](#) → · Bastion Security internship certificate

Software Engineer Intern Feb 2025 – June 2026

National Research Tomsk State University

- Delivered **2 MVPs + 12 diagrams** (UML/SDLC) — builds system reasoning for reproducible findings.

SECURITY RECOGNITION & EVIDENCE

Hall of Fame — 20+ acknowledgments via Bugcrowd (bugcrowd.com/h/mahmoud_adel) — Named: Verisign \$1,000 CSRF → Account Takeover (DomainScope OAuth state, Apr 2018), DigitalOcean (Apr 2019), Pinterest & Dell (2018). **CRITICAL**

Competitive & labs: Bastion internal CTF **Top 5/100**; Hack The Box **Top 0.55% Pro Hacker** — verified badges; TryHackMe **Top 1%** — [@iamkernel](#). **VERIFIED**

Detection & research: ELK SOC Home Lab — 50k+ events, 5 Sigma MITRE-mapped, Kibana dashboards & triage workflow; IR malware triage (isolated Windows 10 VM, Sysmon/KAPE); AppArmor RCE mitigation; API security & AD attack paths. **LAB**

SECURITY RESEARCH

- Verisign CSRF → Account Takeover** — Missing OAuth state → Google-link hijack → persistent ATO + password set (\$1,000 reward, HoF Apr 2018). [Write-up ↗](#)
- AppArmor RCE Killswitch** — Deny /bin/** + network → audit DENIED exec /bin/sh → allowlist containment + hardening. [Write-up ↗](#)
- ELK SOC Detection Engineering** — 50k+ events, 5 Sigma MITRE-mapped rules, Kibana dashboards & triage workflow. [Write-up ↗](#)
